Summary

A highly skilled Backend Software Developer with mid-level expertise in building scalable Java applications using Spring Boot and enhancing API performance through microservices and caching strategies. Proven track record in optimizing data integrity with robust validation and quality checks, along with effective architecture of RESTful APIs. Committed to leveraging strong analytical and backend development skills to drive innovation and efficiency in the backend systems of the target organization.

Skills

- **Languages:** Python, Java, PHP, MySQL, NoSQL
- **Backend Development:** Spring Boot, Hibernate, JPA, JDBC, Apache Kafka, Rest API, Microservices, AWS, S3, GCP.
- **Orchestration Tools:** Docker, Kubernetes, Git, Jira, CI/CD Pipelines.
- **Platforms:** Eclipse, Jupiter Notebook, Visual Studio Code.

Education

LAURENTIAN UNIVERSITY, Sudbury ON

Master of Science, Computer Science

Sep 2023 - Dec 2024

NATIONAL INSTITUTE OF ENGINEER

Bachelor of Engineering, Computer Science and Engineering

Aug 2016 - May 2020

Work Experience

MERAGO HEALTHCARE

Backend Software Developer

Bangalore, KA, IN

May 2021 - May 2023

- Optimized Java applications with Spring Boot by implementing Redis caching, reducing API latency by 30%, resolving connection overflow, and boosting system performance by 25%
- Designed and implemented secure RESTful APIs that enhanced data integrity by conducting rigorous quality checks within data pipelines, resulting in a 40% reduction in erroneous transactions throughout the system.
- Enhanced the migration from blob storage to S3 storage, dramatically enhancing file management efficiency by 50% and reducing file retrieval times by 40%; implemented expiration URLs that reduced unauthorized access incidents by 40%, significantly strengthening data security.
- Integrated a third-party payment API, enabling smooth transaction flows with multiple payment options for large customers. This streamlined payment processing, reduced transaction times by 20%, and improved system security and reliability through advanced encryption and fraud detection measures.

COGNIZANT TECHNOLOGICAL SOLUTIONS PVT

Program Analyst

Bangalore, KA, IN

Jan 2020 - May 2021

- Implemented and delivered comprehensive Java code solutions, including business layers, interfaces, services, and stored procedures, which improved system efficiency and reduced processing time
- Distilled functional and technical requirements, bridging stakeholder vision with clear, actionable specifications, which facilitated smoother project execution and increased stakeholder satisfaction
- Utilized Agile methodologies (Scrum) to successfully deliver projects on time, achieving a 100% on-time delivery rate.

Projects

Cloud monitoring app | [Link](#)

- Led the development of a cloud-monitoring app in Python and containerized it using Docker.
- Employed a container registry (ECR simulated here).
- Deployed the app on Kubernetes hosted on the Google platform and accessed it through a web browser.

Inventory Assistant Chatbot

- Developed a bespoke chatbot using Google Palm and integrated Lang Chain for advanced natural language processing, enabling the e-commerce store to address inventory inquiries precisely.
